QUBE ARC

LOW OVERALL HEIGHT AND BEAUTIFUL AESTHETIC

With the launch of the new QUBE series, ERHARDT Markisen has extended its range of pergolas, into which we are proud to introduce the QUBE Arc. The aluminium pergola protects you from the sun, wind and rain. Thanks to the movable fabric, a new concealed system for collecting and draining rainwater makes the pergola very efficient, even in very heavy rain. The curved roof ensures a very low overall height and a beautiful aesthetic. A wide selection of fabrics (transparent, translucent or opaque) and extensive accessories such as lighting with LED, heaters, vertical awnings with zip function and all-glass sliding doors that can be moved sideways complete the range and allow you to tailor the QUBE Arc to your individual needs.

QUBE ARC

ONE PRODUCT MANY OPTIONS

Sophisticated design

The QUBE Arc is equipped with a curved roof for a beautiful aesthetic. This design product has a low installation height and does not require any pitch. The large selection of fabrics for the curtain enables an individual look depending on your taste.

Functionality

The curved, waterproof curtain is mounted on horizontal slide rails and is powered by a motor and quiet timing belt technology. In its extended state, the fabric reaches its full tension and curvature, thus forming a waterproof curtain against the construction. In its retracted state, the curtain is folded into a minimal package and you can enjoy the sun directly. This ensures its correct functioning and comprehensive protection.

Ambiance with LED

Your personal ambiance may be ensured by means of an integrable LED strip in the surrounding gutter, which you can dim continuously via a remote control.

Intelligent, concealed drainage

Gutter systems located on the ribs channel the rainwater into the surrounding gutter. From there, the water is drained in a concealed manner by the supports. Even when opening the curtain after a rain shower, the water is drained in a controlled manner by the intelligent design of the profiles, and thus protects you completely.

Design

When developing QUBE Arc, the emphasis was placed on a harmonious design combined with an architecturally appealing form and protection from sunlight. This is reflected, among other things, in such details as the upper support section, which is almost inconspicuous, although technically highly efficient in the construction.

Individual opening option

By means of a continuously controllable motor that moves the curtain over 2 slide rails, the waterproof fabric moves to its desired position, up to complete opening. Your remote control ensures maximum comfort.

Tested, safe system

All materials, mechanisms and construction elements have been tested by strict certification bodies who constantly monitor and check the quality of production. Erhardt Markisenbau GmbH has received the CE marking of the product in accordance with EN 13561 and EN 1090. For the QUBE Arc pergola, wind resistance class 6 as per EN 13561:2015 was achieved.

Solutions for all structural situations

Large openings without supports are a trend in today's architecture. For such requirements, we provide special solutions for your construction project. A version which manages without back supports within the structure uses a wall bracket that fits harmoniously into the construction and controls the loads in the structure without any obtrusive supports.

QUBE ARC

AT A GLANCE

All features of QUBE Arc

Maximum dimensions	550 x 1000 cm* Support length max. 250 cm <small>*from 700 cm, additional central support and central reinforcement</small>
Mounting technique	Wall mounting possible
Areas of application	Pergola awning
Technology	<ul style="list-style-type: none"> • Drive and shift via rope technology • Motors compatible with Somfy RTS and io control
Frame colour	<ul style="list-style-type: none"> • White (RAL 9016) • Grey aluminium structured (RAL 9007 finely structured) • Anthracite (DB 703)
Custom colour	Any RAL colour is possible
Fabric designs	<ul style="list-style-type: none"> • FLEXLIGHT SMART 6002 • FLEXLIGHT OPAQUE 6002 OSCURANTE/BLACKOUT • PRECONTRAIINT 502 • PRECONTRAIINT 602 • PRECONTRAIINT 622 OSCURANTE/BLACKOUT • SOLTIS PROOF W96

Special features

- Free-standing, self-supporting construction
- Concealed drainage
- Surrounding gutter profiles
- Wind resistance class 6 in accordance with UNI EN 13561

Optional additional features

- Automatic control for wind, rain and temperature optional
- LED strip in gutter and LED spot in cross brace optional
- Heating optional
- Vertical awnings
- All-glass sliding door
