

QUBE CENTER
THE PERGOLA THAT GIVES YOU ALL-ROUND
PROTECTION

QUBE CENTER

YOUR PERSONAL ALL-ROUND PROTECTION

With its Qube series, ERHARDT Markisen has extended its range of pergolas. The new QUBE Center, represents new and complete sun protection and is a flexible modular and elegant pergola. It combines design and functionality and extends your terrace in such a manner that you can enjoy its surroundings with maximum comfort. Gardens and balconies can be used all year round. It is an “ingenious” solution for protecting yourself from the sun, rain, wind and heat. The timeless design of the QUBE Center allows it to fit perfectly into your environment.

QUBE CENTER

ONE PRODUCT MANY OPTIONS

Complete protection combined with appealing design

The QUBE Center is characterised by its modularity with maximum protection of the terrace. In combination with the waterproof fabric and vertical zip awnings and/or all-glass sliding doors, the aluminium construction creates ideal protection for your terrace without being obtrusive.

Provision of maximum shade

Large terraces can be protected up to a width of 13 m and a depth of 6 m with the QUBE Center. A fabric can have a size of 13 m x 5 m.

Patented sealing system

The rain protection piping has been made with double leaves by a co-extrusion of two different materials. The profile will not move whilst the curtain is in motion and is attached to the fabric with a double seal, ensuring the required impermeability. It also prevents water from penetrating the seal in rain and strong winds.

Ambiance with LED

Your personal ambiance may be ensured by means of integrable LED spots in the drop profile and LED strip in the gutter and on the cross members, which you can dim continuously via a remote control.

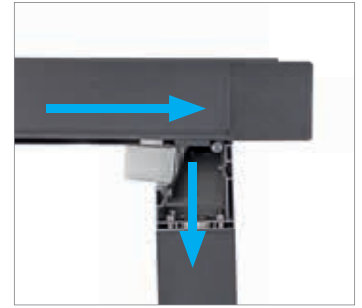

Optimum protection for the fabric

In its retracted state, the fabric is protected against dirt from above thanks to its barely visible rain cover.

Intelligent, concealed drainage

The waterproof fabric channels the rainwater into the front gutter. From there, the water is drained in a concealed manner by the supports. No external downpipe constructions disrupt the harmonious look.

Adjustable support feet

The slightest unevenness of the terrace is incorporated within the construction. The concealed and adjustable support feet enable the pergola to be mounted quickly and perfectly.

Resistant to high wind loads

The construction is designed for higher loads (up to class 7 according to the Beaufort scale) in order to achieve comprehensive protection even in exposed locations.

QUBE CENTER

AT A GLANCE

All features of QUBE Center

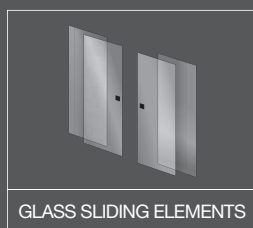

Maximum dimensions	1300 x 650 cm <small>(max. width 1300 cm fabric in one piece)</small>
Mounting technique	Wall mounting
