QUBE LINE

THE DISCREET LIGHTWEIGHT PERGOLA

With its QUBE series, ERHARDT Markisen has extended its range of pergolas. The new QUBE Line is a folding pergola that protects you from the sun, wind and rain during your outdoor activities under your QUBE. It is discreet, lightweight and extremely elegant. The QUBE Line pergola is an innovative product with a precise and reliable fabric guidance system, which combines the lightness of the shapes with the good protective properties of the fabric. The fabric guidance system runs within the guide rails and the mechanism disappears into the discreet, slender structure. Extend your outdoor season with additional optional accessories. At night, LED lighting ensures an atmospheric ambiance on your terrace. The Qube line with its elegant design integrates perfectly into your surroundings.

QUBE LINE

ONE PRODUCT MANY OPTIONS

Sleek profiles, linear design

The QUBE Line is characterised by its sleek profiles and clear linear system. The lightweight aluminium construction, in combination with the waterproof fabric, creates ideal protection for your terrace without being obtrusive.

Provision of maximum shade

Large terraces can be protected up to a width of 13 m and a depth of 6 m with the QUBE Line. A fabric can have a size of 13 m x 5 m.

Patented sealing system

The rain protection piping has been made with double leaves by a co-extrusion of two different materials. The profile will not move whilst the curtain is in motion and is attached to the fabric with a double seal, ensuring the required impermeability. It also prevents water from penetrating the seal in rain and strong winds.

Ambiance with LED

Your personal ambiance may be ensured by means of integrable LED spots in the drop profile, which you can dim continuously via a remote control.

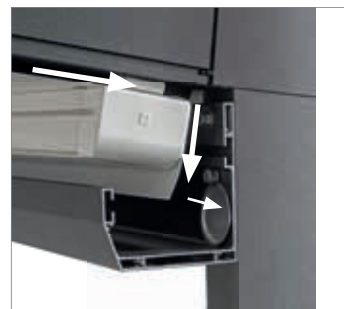

Optimum protection for the fabric

In its retracted state, the fabric is protected against dirt from above thanks to its barely visible rain cover.

Intelligent, concealed drainage

The waterproof fabric channels the rainwater into the front gutter. From there, the water is drained in a concealed manner by the supports. No external downpipe constructions disrupt the harmonious look.

Adjustable support feet

The slightest unevenness of the terrace is incorporated within the construction. The concealed and adjustable support feet enable the pergola to be mounted quickly and perfectly.

Many options for your terrace

The QUBE line offers a wide range of accessories to enable you to design your terrace individually. An accompanying gutter refines the overall look and makes it even more sleek. Heating and light complete the whole package.

QUBE LINE

AT A GLANCE

All features of QUBE Line

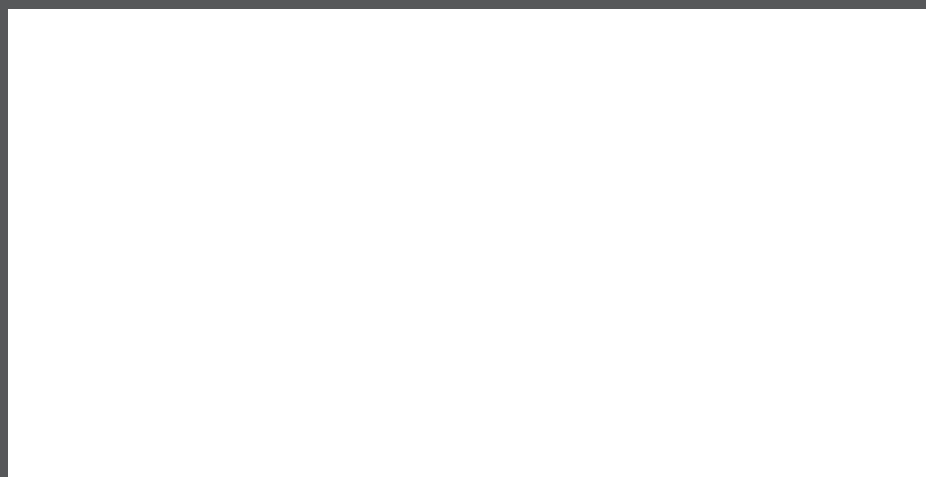

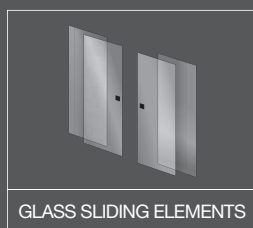

Maximum dimensions	1300 x 600 cm <small>(max. width 1300 cm fabric in one piece)</small>
