## **ERHARDT TM18**

### **INDIVIDUAL PROTECTION FOR YOUR TERRACE**

You can relax in your favourite place in a comfortable, shaded atmosphere with the new TM18 terrace awning. The TM18 will convince you with its completely new design and its zip technology, which means that there is no longer a gap between the guide rail and the fabric itself. It is suitable as a small, compact awning, especially for terrace roofing and conservatories. The awning can be installed above or below the roof depending on the requirements thanks to its slender design.

The two elegant side guide rails are fitted using special spacers. These rails provide the facility for fitting the fabric either with the zip function or as standard with a gap. Coupling several units is also possible at different extensions. An extensive range of accessories such as lighting rails, radiant heaters and radio motors with special sensors for wind, rain and sun are available.

**The ERHARDT TM18 provides individual protection for your terrace with its fresh design and the wide range of accessories.**
